## Mean

Assume  $\varepsilon_t$  has mean 0 and variance  $\sigma^2$ 

$$y_{t} = \mu + \varepsilon_{t}$$

$$y_{T+h} = \mu + \varepsilon_{T+h}$$

$$E[y_{T+h|T}] = \mu$$

$$V[y_{T+h|T}] = V(\hat{\mu}) + V(\varepsilon_{t})$$

$$= \sigma^{2}/T + \sigma^{2}$$

$$= \sigma^{2}(1 + 1/T)$$

## **Naive**

$$y_{t} = y_{t-1} + \varepsilon_{t}$$

$$y_{T+h} = y_{T+h-1} + \varepsilon_{T+h}$$

$$= y_{T+h-2} + \varepsilon_{T+h-1} + \varepsilon_{T+h}$$

$$\vdots$$

$$= y_{T} + \sum_{i=0}^{h-1} \varepsilon_{T+h-i}$$

$$E[y_{T+h|T}] = y_{T}$$

$$V[y_{T+h|T}] = h\sigma^{2}$$
